

SUPERDROL[®] NG

Read the entire insert before taking Superdrol-NG

Superdrol-NG (Next Generation) contains the worlds #1 selling pro-hormone Prasterone, which will provide immediate results that you can feel from the very first dose. Superdrol-NG is a combination of four synergistic components that produce incredibly dry gains in lean muscle mass, muscle hardness, and massive strength gains. While on cycle you will notice an increase in aggression, a surging rush of intense energy, mental focus and drive, and an enhanced sex drive! Superdrol-NG is also non-toxic. No liver toxicity, no elevation in blood pressure and best of all, there is zero negative impact on blood lipid levels this time around! Welcome to the world of Superdrol-NG, brought to you by Anabolic Xtreme!

Anabolic Driver: Prasterone (Delta-5-androsten-3b-ol-17-one)

Superdrol-NG provides 170mg of Prasterone per serving. Prasterone is a chemical relative of testosterone that is well researched, safe, and healthy for your immune system. Produced in the adrenal glands, Prasterone is a very potent anabolic/androgenic hormone which converts into Androstenedione, Testosterone the mother of all bodybuilding hormones, and 5-AD (5-androstenediol). 5-AD is an active anabolic on its own, and greatly amplifies the effects of testosterone while converting directly to testosterone at a rate of about 15%. Both testosterone and 5-AD can then bind to your androgen receptors and signal your muscles to GROW!

Why are androgen receptors so important? Our bodies are made up of various kinds of cells. Cells are the engine that drives all life. On every cell's surface, there are anywhere from thousands to millions of receptors, each with its own purpose and function. These receptors act as "keyholes" that allow direct access to the cell's nucleus when the proper "key" is inserted. Each of these different receptors requires a specific key to unlock the cell and deliver its' specified message and control the engine. When it comes to muscle growth, there is one receptor that matters the most – the powerful androgen receptor. Testosterone and 5-AD are the precise keys that snugly fit into the androgen receptor keyhole to unlock the cell's powerful muscle building potential. It does this by delivering a very simple yet powerful message to the interior of the cell. That message is GROW! And when properly nourished and stimulated with hardcore resistance training, the cell carries out the requested action, protein synthesis, meaning GROW muscle!

After Prasterone enters your body, converts into Testosterone and 5-AD, then triggers your androgen receptors, you will experience intense muscle hardness, incredible gains in size, and a monstrous surge in strength. You will also experience a drastic increase in positive aggression and a sense of confidence we call "The Alpha Male".

Estrogen Eliminator

When you go on cycle, nobody likes to look fat, puffy, bloated, and to look into the mirror and see a "soft" body staring back at them. Hard and dry are how you like your gains to come so that nobody looks at you afterwards and says "Dude, you were HUGE for a while! What happened? You're small again." Yep, excessive conversion of male androgens into female estrogens will do that to you. To prevent you from ever having to hear that statement, we loaded Superdrol-NG with a very precise dose of the most efficient compound for controlling estrogen - ATD.

ATD (6-Etioallochol-1,4-diene-3,17-dione) is an aromatase inhibitor, with an incredibly strong binding affinity. Aromatase is an enzyme in your body that binds to your male androgens like testosterone and converts them into estrogen. By inhibiting the activity of aromatase, Prasterone and 5-AD are free to crank up the anabolic machinery in your muscle cells to make you grow. Now you won't have to worry about excess estrogen, and you're free to build a more muscular body that not only looks massive, but is lean, hard, and dry!

Injection Matrix

Anabolic Xtreme has infused Superdrol-NG with a very powerful, performance enhancing formula to ignite Xtreme intensity, drive and focus! The Injection Matrix is fueled by two components: MX-C and Aphrodine.

MX-C fools your cells into burning an alternate fuel source first and sparing your cellular fuel for later use. MX-C (methyl xanthine) shares similar chemical properties to ATP and cAMP, which are major sources of energy for your cells and can therefore bind to the adenosine receptors. Ok, so what? When cAMP is broken down inside the cell, the body can no longer

use it as energy. So you run out of energy and your set comes to a grinding halt mid-rep! However, MX-C keeps levels of cAMP and ATP elevated by tricking cellular enzymes to break down the MX-C instead. So now you'll have more fuel to crank through more sets and more reps, leading to greater growth!

Aphrodine injects a heightened sense of mental and physical alertness, greater skeletal-muscle readiness, increases lipolysis and enhances blood flow. Aphrodine works by increasing the levels of noradrenalin (NA), a neurotransmitter in the brain and hormone in the body that also inhibits an enzyme known to break down cAMP. The resulting effect is more energy for your workouts! Aphrodine and NA then work synergistically to stimulate the beta receptors and inhibit the alpha receptors on fat cells. Blood vessels expand massively as a result and fat cells get the signal to release uncoupling proteins that break down and release stored fat.

So what does this mean for us guys looking to build more muscle? Heightened awareness and increased muscle tissue readiness means that you can focus with razor sharp intensity on your workouts, along with generating stronger muscle tissue contractions for a greater period of time. This ultimately yields more strength and more muscle due to the more intense stimulus you can now provide to your muscle tissues.

HPTA Support Matrix

The Hypothalamus Pituitary Testes Axis (HPTA) regulates testosterone production in the male body. More importantly, it keeps your sex drive going! Fueled by 25A-diene and Gokshura, the HPTA Support Matrix will optimize the male hormonal environment, thereby maintaining and elevating your sex drive while on cycle! This will greatly minimize the effects of HPTA suppression when your cycle is complete, making recovery a breeze!

25A-diene (25A-Spirosta-3,5-diene), the first component of the HPTA Support Matrix works by increasing androgen production from the adrenal cortex. These androgens are then converted into testosterone. More testosterone = more sex! Our unique 25A-diene also has anabolic/androgenic activity similar to testosterone, and can bind to the androgen receptor, igniting the GROW signal. So now you'll have three pathways cranking up your anabolic machinery through androgen receptor stimulation while providing a major boost in the bedroom department!

Gokshura is the second component utilized in Superdrol-NG's Metabolic HPTA Support Matrix and is renowned for its libido boosting effects. It contains a very high 45% potency of the steroidal saponins protodioscin, furostanol, and tribol. The steroidal saponins found in Gokshura can serve as the back-bone for additional androgen production in the male body, further increasing your sex drive and desire!

Okay, time for a little icing on the cake! 4-Hydroxyisoleucine (4-HIL) dramatically amps up the effects of insulin, causing insulin to shuttle nutrients, especially carbohydrates, into your muscle cells. This carb-loading effect is identical to what competitive bodybuilders do to get that thick, full muscle belly look on stage. So now, your muscles will not only look and feel swollen like a competitive bodybuilder, but they'll also be in an explosively anabolic environment. Couple the increased glycogen storage in your muscle cells with the unchained anabolic cascade of an unstoppable growth signal that Prasterone delivers through the androgen receptors on your muscle cells, and your muscles will have no choice but to grow!

Post Cycle Therapy (PCT). What is it and why do I need it?

The power of Superdrol-NG lies in its' ability to convert to testosterone and 5-AD, successfully enter the bloodstream, and unlock powerful androgen receptors to make your muscles GROW. However, anytime you introduce an outside source of hormones to your body, your body will respond by decreasing its natural output of those hormones, including testosterone. When you finish a cycle, your natural production of testosterone is slightly depressed, estrogen levels are typically elevated, and cortisol levels are wreaking havoc on your newly earned muscle tissue. This is not the ideal environment to maintain your gains! Enter Post Cycle Therapy (PCT). The goal of any PCT is to restore normal hormonal balance to your body, especially testosterone. To raise testosterone production you must lower estrogen, and 6-bromodione, found in our Advanced PCT, will do just that. Your hypothalamus will sense the imbalance of estrogen and respond by signaling your testes to restart testosterone production. By following your cycle with PCT, you will preserve the muscle and strength gains made and minimize side effects such as decreased libido that are often experienced post cycle. Anabolic Xtreme Advanced PCT will effectively restore balance to your natural testosterone production and is strongly recommended following all Superdrol-NG cycles.

The Hardcore Superdrol-NG Cycle

	Week 1	Week 2	Week 3	Week 4	Week 5	Week 6	Week 7	Week 8
Superdrol-NG	4 caps/day	4 caps/day	4 caps/day	4 caps/day				
Trisorbagen	4 caps/day	4 caps/day	4 caps/day	4 caps/day				
Mass FX	4 caps/day	4 caps/day	4 caps/day	4 caps/day				
Advanced PCT					3 caps/day	3 caps/day	3 caps/day	3 caps/day
Retain					3 caps/day	3 caps/day	3 caps/day	3 caps/day

5 tips to maximize your results while on Superdrol-Next Generation™:

1. Take Superdrol NG once every four (4) hours with a meal that includes a quality fat content. On workout days, you may take two (2) caps at once if your tolerance level permits, approximately one (1) hour prior to working out.
2. Try taking Superdrol NG (1-2) caps pre-workout for intense training.
3. Keep your protein intake high and frequent. To gain lean mass, consume at least 1.5 grams of protein per pound of body weight. Divide your protein intake into six (6) or more evenly spaced meals per day, three (3) hours apart.
4. Train consistently and get at least eight (8) hours of sleep a night. On workout days, try to get nine (9) hours of sleep to insure proper recovery.
5. While cycling Superdrol NG, keep your fluid intake very high and consume 1 to 1.5 gallons of water daily.

Trisorbagen™ 3-Way Bioabsorption Agent & Anabolic Amplifier

In today's pro-hormone world absorption is everything! Trisorbagen was developed to maximize the absorption, potency, and duration (half-life) of any oral hormonal supplement to include Superdrol-NG. In order for any oral supplement to be effective, it must get into the bloodstream and then remain there to do its' work. Trisorbagen is specifically formulated to overcome both of these challenges to exponentially increase the absorption and duration of Superdrol-NG. All of this is accomplished by combining three (3) powerful ingredients in a precise blend.

Bioperine® - This powerful patented supplement plays a critical role in the absorption within the digestive system and increases its active nutrient transportation in the bloodstream. We use the most active extract available for maximum effectiveness. Bioperine has been tested in several clinical studies and has shown to increase the absorption of minerals, fat-soluble and water-soluble vitamins.

Emblica Officinalis - Another active component increasing absorption within the digestive system and has been used for centuries in Ancient East Indian Medicine (Ayurvedic) as a potent digestion, absorption and assimilation enhancer of food and nutrients. Emblica Officinalis has also been utilized for its' overall positive influence on physiology, help strengthen the liver, and rid the body of toxins while on any hormonal cycle.

6,7,-dihydroxybergamottin (DHB)

- After optimizing the absorption into the bloodstream, DHB acts to prolong the activity by extending the half-life and duration within the bloodstream. Many studies on this natural extract show large increases in active concentrations within the blood when ingested with or around the same timeframe as the target compound. Larger blood concentrations give you more ability to GROW!

These three (3) ingredients are combined in large amounts and specific ratios to maximize the power of any oral hormonal supplement. You will know it when you try it.

Every ingredient in Advanced PCT was carefully researched, tested, and integrated in precise ratios to create the new standard for post cycle therapy products. Advanced PCT will propel your hormones back to healthy levels quickly, allowing you to keep those hard earned gains and avoid the effects of the body's reaction to the end of any pro-hormone cycle. For additional protection against other non-hormonal post cycle factors that can affect muscle retention, see Anabolic Xtreme Retain2 and add it to your post cycle regimen.

25R-diol has been developed exclusively by Anabolic Xtreme.. This powerful pro-anabolic was designed to be stacked with 3-AD to create the most potent lean muscle building stack available today. Mass FX will increase testosterone levels, deliver rock hard pumps, promote the Alpha Male mentality, increase aggression, build xtreme muscle mass and give immediate strength gains. Mass FX will deliver the results you want in just a few days of usage and will continue though out your cycle. Welcome to the world of Mass FX.
